

# What's New in Abila MIP Fund Accounting™ Version 2017.1?

Nonprofit finance and accounting professionals need more visibility into both their finances and personnel. In this release, we've expanded reporting capabilities across Abila MIP Fund Accounting™ to improve your ability to track and report on what's important to your team and stakeholders.

We've also enhanced key **Accounts Payable workflows**, added new administration options supporting your **audit trail**, and **expanded the human resource management features** integrated within MIP.

- **Updated Accounts Payable Workflow** – Designed to save valuable time by providing scalable invoice payments and check printing. Easily create batches of invoices to pay and auto-reversals of invoices with voided checks, as well as check address validation on email addresses.
- **Broad Report Enhancements** – Improved ability to filter, provide additional fields, and generate key Accounts Payable, Accounts Receivable, and General Ledger reports. This includes debit and credit columns for transaction reports and new print code options for working trial balance reports.
- **New Administration Options** – Increased visibility into users, security reports, and the organization's overall audit trail. The summary organization audit log will show Accounts Payable status changes and Payroll updates. The User Information report can show security group and user IDs for improved tracking. Attachments will default to the recommended encrypted option for users. *(Note: STMP-based email settings are now required in MIP and replace older MAPI email settings.)*
- **New Payroll and Human Resource Features** – Track employees, OSHA claims, and streamline payroll processes.
  - **Payroll** – Enhancements include a new form for reprinting paystubs as vouchers. Plus, employee status is now an available filter and field for timesheet reports.
  - **Human Resources** – This module offers a new OSHA claims form with available query and related reports.
  - **Employee Web Services (EWS)** – Gender dropdown is now editable
  - **Benefit Enrollment** – Usability enhancements and additional query options for enrollment processing are included.
- **Abila Advanced Reporting** – Improve the ability to compare your current financial position to budget. New dynamic column display option for actual vs. budgeted comparisons is now available.
- **Expanded Accounts Payable API** – Our REST-based API (application programming interface) can be used for a variety of integration needs.
